INTRODUCTION

Innovative products and new practices are developed and adopted in the field of concrete technology to meet the challenging needs of rapid development in construction. Concrete forms a vital ingredient in infrastructure development with its versatile and extensive applications. It lends itself to a variety of innovative designs as a result of its desirable properties. The making of concrete is an art as well as science. Science because all the ingredients are proportioned as per the code to get the targeted strength and durability, an art because in spite of accurate proportioning, quality of concrete depends on the way it is mixed, placed, compacted and cured. New advancements in concrete and cement-based products are completely changing the design and construction worlds. SCC and computerized precision color control are revolutionizing the precast industry. The Tilt-Up industry is reaching new heights with the record lift nearing 100 feet. With the explosive growth in high-rise residential construction, the Load-Bearing Wall (LBW) system is gaining recognition. Manufacturers and technologists, of late, are introducing innovative products and systems into various markets responding to their need. Hence, there is a need to bring awareness about these developments among various stakeholders in civil engineering industry, including marketers, property owners etc.

Indian Concrete Institute Karnataka Bangalore Centre realizing the need to disseminate the knowledge of recent improvements/developments in construction products, and innovations in construction methodologies for civil engineers, has organized this Seminar and Product Demonstration (Deminar) in association with **Faculty of Civil Engineering, UVCE, Bangalore University**. This will serve as a platform for the industries to take part and demonstrate their products. This time, ICI has designed an innovative format of this Deminar, such that, the participants can watch even the outdoor product/process demonstrations, in the comfort of the conference hall, without a need for moving out of their seats.
